

Higher Probability- Commodity Trading

A Comprehensive Guide to Commodity Market Analysis, Strategy Development, and Risk Management Techniques Aimed at Favorably Shifting the Odds of Success

By Carley Garner – Commodity Market Analysis & Broker at Decarleytrading.com Review by Larry Jacobs

This excellent book takes serious readers on a pathway through dangerous futures trading markets. It sheds great information on topics that are not very well explained in other trading literature from the unique perspective of a commodity broker with the intention on increasing the odds for success for trading market participants.

Carley discusses many alternative market concepts and views such as option selling techniques, hedging future positions with options and even combining fundamentals, seasonal, sentiment and technical analysis to gauge market changes.

Carley is a contributor to CNBC's Mad Money TV program which is hosted by Jim Cramer. She has been a futures broker for over a decade. She has been witness to many of the wild swings during that time.

Carley does have an ability to come up with complex trading concepts with an easily read book format. Readers will walk away with a much better understanding of how the futures and option markets work. You'll also get the benefit of having this explained through the eyes of one of the foremost experts in the futures and options markets.

This book is an easy to understand book for future traders of all levels. Carley makes an otherwise dry subject very interesting. The book offers advanced discussions and building blocks for understanding.

I highly recommend this book and I am confident that it will benefit traders of all skill levels in the futures and options markets.
